#### II. Course Description:

The curriculum of general pathology aims at preparing the students in basic understanding of diseases and their pathogenesis. Introduction to pathology, basic definitions and familiarization with the common terms used in pathology, causes and mechanisms of cell injury, reversible and irreversible injury, systemic pathology, introduction of hyperplasia, hypoplasia, hypertrophy, atrophy, metaplasia, necrosis and apoptosis and microscopic features of pathological matters.

#### III. Course Intended Learning Outcomes (CILOs): **Knowledge and Understanding:** Alignment of CILOs (Course Intended Learning Outcomes) to PILOs (Program Intended Learning Outcomes) **Knowledge and Understanding PILOs** Knowledge and Understanding CILOs After completing this program, students After completing this course, students would be able to: would be able to: Demonstrate knowledge and understanding of the **a1** A1 pathological terminologies, the concept of cell injury, the change produces thereby, in the different tissues and organs and the body capacity for healing. Explain the etiopathogenesis, the pathological effects, **A6** a2 and the clinicopathological correlation of common infectious and non-infectious diseases. Demonstrate knowledge and understanding of the A2,A4 a3 concept of neoplasia with respect to etiology, gross and microscopic features, diagnosis and prognosis in different tissues and organs of the body.

| Intellectual Skills :                                     |          |  |
|---|----------|--|

#### **II. Course Description:**

This Course designed to teach Pharmacy students how to perform the antimicrobial testing using the various methods of antimicrobial evaluation as disc agar diffusion, MIC, MBC determination, Sterility testing of Pharmaceutical preparations, and evaluation of efficacy of pharmaceutical preservation, vaccine preparation and mods of vaccination.

#### III. Course Objectives:

The overall aims of the course are:

1. To provide the student with knowledge of the concept of sterilization, disinfection, antisepsis and preservation.

- 2. To enable the students to understand for the different chemical and physical methods used to control microbial contamination.
- 3. To provide the students with skills for the methods used for the evaluation of antimicrobial efficacy and factors affecting it.

| IV. Course Intended Learning Outcomes                     | s (CILOs) :   |

#### X. Learning Resources:

• Written in the following order: ( Author - Year of publication – Title – Edition – Place of publication – Publisher).

#### 1- Required Textbook(s) ( maximum two ).

1) Pharmaceutical Microbiology – Edt. by W.B.Hugo & A.D.Russell Sixth edition. Blackwell scientific Publications

#### 2- Essential References.

- 1) Prescott's Microbiology 8th Edition by Willey, Joanne, Sherwood, Linda, Woolverton, Chris
- 2) Pharmaceutical Microbiology by Ashutosh Kar

#### 3- Electronic Materials and Web Sites etc.

#### II. Course Description:

This course is the second part of "Pharmaceutics" courses that are intended to provide knowledge and skills in designing pharmaceutical dosage forms. It deals with designing of compressed gases (pharmaceutical aerosols), semisolid dosage forms and suppositories.

|    | III. Intended learning outcomes (ILOs)   |                                    |   |  |  |  |
|----|--|------------------------------------|---|--|--|--|
|    | Course Intended Learning Outcomes  | Program Intended Learning Outcomes |   |  |  |  |
| a1 | Describe the stages of designing pharmaceutical aerosols, semisolid preparations and suppositories.  | A1                                 | knows the basic principles of pharmaceutical, medical, health & environmental sciences, as well as, pharmaceutical calculations.  |  |  |  |
| a2 | Explicit the general properties, the types and roles of excipients, advantages and disadvantages of pharmaceutical aerosols, semisolid and suppositories dosage forms. | A2                                 | Sufficiently knows of the analytical & biotechnical techniques, necessary for isolation, refinement, analysis& titration& manufacturing of pharmaceutical substances & preparations |  |  |  |
| b1 | Classify pharmaceutical aerosols, semisolid preparations and suppositories.  | B2                                 | Accurately suggests of the correct choice of the drug treatment for various disease conditions according to the foundations of pharmacological therapy                              |  |  |  |
| b2 | Design pharmaceutical aerosols, semisolid preparations and suppositories.  | B4                                 | properly Innovates of pharmaceutical products & evaluates them on the scientific bases.   |  |  |  |
| c1 | Handle efficiently and safely the chemical materials and tools used in the laboratory.   | <b>C2</b>                          | Applies the concepts of pharmacovigilance<br>in the dispensing and the preparation,<br>storage and distribution of medicines safely<br>and effectively                              |  |  |  |
| c2 | Operate the instruments and prepare extemporaneous semisolid preparations and suppositories.   | <b>C4</b>                          | Efficiently operates, the different technologies and equipment in the area of pharmacy  |  |  |  |
| d1 | Participate efficiently with colleagues in a team work   | D1                                 | Works effectively in a unique team  |  |  |  |
| d2 | Communicate effectively and behave in discipline with colleagues.  | D4                                 | Resides excellent relationships with the patients & related healthcare directions.  |  |  |  |

| (A) Alignment Course Intended Learning Outcomes of Knowledge and Understanding to Teaching Strategies and Assessment Strategies: |                       |                        |  |  |  |  |
|--|-----------------------|------------------------|--|--|--|--|
| Course Intended Learning Outcomes  | Teaching strategies   | Assessment Strategies  |  |  |  |  |
| a1. Describe the stages of designing   | - Lectures and Groups | Quizzes, Written exam. |  |  |  |  |

#### II. Course Description:

This course is the second part of "Pharmaceutics "courses that are intended to provide knowledge and skills in designing pharmaceutical dosage forms. It deals with designing of compressed gases (pharmaceutical aerosols), semisolid dosage forms and suppositories.

# Republic of Yemen Ministry of Higher Education & Scientific Research Thamar University Faculty of Medical Science

**Department of Pharmacy** 

الجمهورية اليمنية وزارة التعليم العالي والبحث العلمي جامعة ذمار كلية العلوم الطبية قسم الصيدلة

#### III. Intended learning outcomes (ILOs) of the course:

- Brief summary of the knowledge or skill the course is intended to develop:
- 1. Describe the stages of designing pharmaceutical aerosols, semisolid preparations and suppositories.
- 2. Explicit the general properties, the types and roles of excipients, advantages and disadvantages of pharmaceutical aerosols, semisolid and suppositories dosage forms.
- 3. Classify pharmaceutical aerosols, semisolid preparations and suppositories.
- 4. Design pharmaceutical aerosols, semisolid preparations and suppositories.
- 5. Handle efficiently and safely the chemical materials and tools used in the laboratory
- 6. Operate the instruments and prepare extemporaneous semisolid preparations and suppositories.
- 7. Communicate effectively and behave in discipline with colleagues.
- 8. Participate efficiently with colleagues in a team work.

#### **IV. Course Content:**

#### **A** – Theoretical Aspect:

| Order | Units/Topics List                              | Sub Topics List   | Number<br>of Weeks | contact<br>hours |
|-------|--|---|--------------------|------------------|
| 1     | Pharmaceutical aerosols                        | Definition, advantages, disadvantages, types of aerosols, anatomical features of the bronchi, Pressurized packages (Type of propellants, Containers, Formulation aspects, Air-blast nebulizers), methods of preparation (pressurized filling, cold filling), quality control evaluation | 3                  | 6                |
| 2     | Semisolid dosage<br>forms:<br>(1) Introduction | <ul> <li>introduction: definitions, advantages, disadvantages, types, anatomical features and targets of the skin, Factors effect on drug absorption from the skin</li> <li>Classification of semisolid preparation</li> </ul>  | 1                  | 2                |

#### II. Course Description:

This course uses the knowledge and understanding gained in the biochemistry1 to provide students van appreciation and an understanding of key metabolic biochemistry and molecular biology concepts. topics covered include concept of bioenergetics, digestion absorption, transporting and metabolism of carbohydrates, lipids, proteins and nucleic acids. The course enables students to understands metabolism pathways, tissue specific metabolism and its control and metabolic disorders. The course combines

lectures, tutorials and practical. This practical component focusses on estimation of biomolecules rela to carbohydrate, lipids and proteins and some metabolites associated with metabolic disorders.

| III. Course Intended Learning Outcomes (CILOs):  |  |  |  |  |

#### I. Course Policies:

who exceed the 25% limit without a medical or emergency excuse acceptable to and approved by the Dean of the relevant college shall not be allowed to take the final examination and shall receive a mark of zero for the course.

Tardy: Students should be attending the classes, as it has required for the assessments if the student is 15 minutes late in attending to the class for more than two classes he will loss 50% of quizzes mark -

Class Attendance: Absence from lectures and/or tutorials shall not exceed 25%. Students

Exam Attendance/Punctuality: All examination and their roles will be according to Students

| affairs regulations   |
|---|
| Assignments & Projects:Student, who is submitting the assignments or the projects on time,    |
| will be awarded good percentage in grading of participation.                                  |
| Cheating: All students must be an ideal behavior, respect each other, their teachers, and     |
| respect the roles of the colleague. In addition, students should follow safety roles while    |
| working in the lab. Those who has been caught in any cheating case will be punished           |
| according to the Students affairs regulations   |
| -   |
| Plagiarism: Student will be punished depend upon gravity of the action and according to       |
| Students affairs regulations which might be ranged from rewriting the homework to             |
| suspension or dismissal   |
|   |
| Other policies:Using mobile or another electronic device capable to store or transfer data in |
| class during the lecture or the exam is forbidden.  |
| -   |

#### I. Course Description:

This course deal with the study of introduction to instrumental analysis, Physical methods, Spectrochemical methods, Nuclear Magnetic Resonance (NMR), IR, Mass spectroscopy, Chromatography.

Also, it covers some experiments for quantitative and qualitative determination of some pharmaceutical substances.

#### II. Aims and Intended learning outcomes (ILOs) of the course:

#### 1. Aims of The Course:

#### The overall aims of the course are:

- To recognize the basic principles of instrumental analysis.
- To explain physical, spectroscopic and chromatographic method of analysis.
- To illustrate instrumentation and interpretation of spectra obtained from different method
- To check the purity of raw material and quality control of pharmaceutical preparation
- To discuss the advantages and disadvantages of all types of analysis.
- To cover the applications of these methods to pharmaceutical compounds

#### 2. Intended learning outcomes (ILOs) of the course:

#### A. Knowledge And Understanding:

• After successful completion the course, students will be able to:

| Prog | ram   | Intended | Learning | Outcomes | Cou  | rse Intended L | earning (  | Outcomes  | (CIL    | Os)             |          |

#### VI. Learning Resources:

#### 1. Required Textbook(s) (maximum two).

- 1. Skoog, D. A., Holler, F. J., & Crouch, S. R. (2007). *Instrumental analysis* (Vol. 47). Belmont: Brooks/Cole, Cengage Learning.
- 2. Mistry, B. D. (2009). *A handbook of spectroscopic data* (UV, JR, PMR, JJCNMR and Mass Spectroscopy), Oxford Book Company, Jaipur, *Chemistry*, 600.
- 3. In addition to the above, the students will be provided with handouts by the lecturer.

#### 2. Recommended Readings and Reference Materials.

- Skoog, D. A., & Donald, M. (2014). *Fundamentals of Analytical Chemistry*, 9th ed. West Sounder's College Publishing, Japan.
- Christian, G. D., Dasgupta, P. K., & Schug, K. A. (2013). *Analytical chemistry*. John Wiley & Sons.

#### 3. Essential References.

- 1. Ahuja, S., & Jespersen, N. (Eds.). (2006). Modern instrumental analysis. Elsevier.
- 2. Rouessac, F., & Rouessac, A. (2022). *Chemical analysis: modern instrumentation methods and techniques*. John Wiley & Sons.

#### 4. Electronic Materials and Web Sites etc.

- Analytical letters
- Pharmaceutical and biomedical analysis
- Analytical chemistry
- $http://www.media fire.com/download/tfw77m3ewhbte0s/Animation\_Spectro\_Photomultiplier.mp4\\$
- www.sciencedirect.com

#### 5. Other Learning Material.

- Laboratory instruments and equipment's are needed
- Data show projector

| V | VII. Course Policies:   |
|---|---|
| ` | Class Attendance:  ☐ Absence from lectures and/or tutorials shall not exceed 25%. Students who exceed the 25% limit without a medical or emergency excuse acceptable to and approved by the Dean of the relevant college shall not be allowed to take the final examination and shall receive a mark of zero for the course.                          |
| ۲ | Tardy:  ☐ Students should be attending the classes as its required for the assessments if the student is 15 minutes late in attending to the class for more than two classes, he will loss 50% of quizzes mark.   |
| ٣ | Exam Attendance/Punctuality:   All examination and their roles will be according to Students affairs regulations  |
| ٤ | Assignments & Projects:  - Student who is submitting the assignments or the projects on time, will be awarded good percentage in grading of participation.  |
| ٥ | <ul> <li>Cheating:</li> <li>All students must be an ideal behavior and respect each other, their teachers and respect the roles of the colleague. In addition, students should follow safety roles while working in the lab. Those who has been caught in any cheating case will be punished according to the students affairs regulations</li> </ul> |
| 6 | Plagiarism:  ☐ Student will be punished depend upon gravity of the action and according to Students affairs regulations which might be ranged from rewriting the homework to suspension or dismissal  |
| 7 | Other policies:  - Using mobile or another electronic device capable to store or transfer data in class during the lecture or the exam is forbidden.  |

#### I. Course Description:

ourse will provide the students with the necessary skills for separation and identification of the active tuents obtained from natural sources (alkaloids – resin and resin combination – bitter principles), the different ds of separation (Chromatography) and then identify these active ingredients either in pure form or a mixture ell as the different methods to evaluate these components and how to deal with the side effects of some onents (if any) and how to overcome it and solve problems. As well as how to deal with poisoning and abuse notes.

II. Aims and Intended learning outcomes (ILOs) of the course:

#### 1. Aims of The Course:

#### The overall aims of the course are:

- 1. To provides the students with impart knowledge about important chemical classes of compounds having bio activity.
- 2. To offer the students with the primary and advanced methods of chromatography that are currently used for isolation, and qualitative and quantitative determination of biologically active compounds.

#### 2. Intended learning outcomes (ILOs) of the course:

#### A. Knowledge And Understanding:

• After successful completion the course, students will be able to:

| V] | II. Course Policies:  |
|----|---|
| ١  | Class Attendance:  Absence from lectures and/or tutorials shall not exceed 25%. Students who exceed the 25% limit without a medical or emergency excuse acceptable to and approved by the Dean of the relevant college shall not be allowed to take the final examination and shall receive a mark of zero for the course.  |
| ۲  | Tardy:  ☐ Students should be attending the classes as its required for the assessments if the student is 15 minutes late in attending to the class for more than two classes he will loss 50% of quizzes mark.  |
| ٣  | Exam Attendance/Punctuality:  All examination and their roles will be according to Students affairs regulations   |
| ŧ  | <ul> <li>Assignments &amp; Projects:</li> <li>Student who is submitting the assignments or the projects on time, will be awarded good percentage in grading of participation.</li> </ul>  |
| ٥  | <ul> <li>Cheating:         <ul> <li>All students must be an ideal behavior and respect each other, their teachers and respect the roles of the colleague. In addition, students should follow safety roles while working in the lab. Those who has been caught in any cheating case will be punished according to the Students affairs regulations</li> </ul> </li> </ul> |
| 6  | Plagiarism:  ☐ Student will be punished depend upon gravity of the action and according to Students affairs regulations which might be ranged from rewriting the homework to suspension or dismissal  |
| 7  | Other policies:  - Using mobile or another electronic device capable to store or transfer data in class during the lecture or the exam is forbidden.  |

#### **II. Course Description:**

The course covers the important concepts that need by student to know about the basis of drug action and the pharmacological basis of therapeutic. The first part of this course deals with general principles of pharmacology, including pharmacokinetics (absorption, distribution, metabolism, and elimination); pharmacodynamics (essentials of drug action, drug-receptor interactions, types of agonist and antagonist, dose -response relationships, therapeutic index, efficacy, and potency), unwanted drug effects, and drug interactions. The second part focuses on systemic pharmacology and involves discussions of the major drug categories as they relate to organ systems or major pathophysiological diseases. This categories

include, drugs acting on the autonomic nervous system (cholinergic, anticholinergic, adrenergic and antiadrenergic drugs) and autacoid drugs .

#### III. Course Objectives:

#### The overall aims of the course are:

- 1. To know the essentials of general pharmacology, drugs dosage forms and types of routes of administrations of drugs and their advantages and disadvantages.
- 2. To explain the pharmacokinetics (absorption, plasma binding protein, distribution, metabolism, elimination) of drugs.
- 3. To understand the Pharmacodynamics (mechanism of action & biological actions) of drugs.
- 4. To recognize the types of drug-drug interactions and drug toxicity.
- 5. To distinguish the mechanism, uses and side effects of categories of drugs acting on the autonomic nervous system, and autacoid drugs.

#### IV. Course Intended Learning Outcomes (CILOs):

#### **Knowledge and Understanding:**

Alignment of CILOs (Course Intended Learning Outcomes) to PILOs (Program Intended Learning Outcomes)

#### After completing the course, the student will be able to:

- a1: **Understand** in details the basic terms and concepts in general pharmacology, including, pharmacokinetics, pharmacodynamics, adverse effects, and drug interactions.
- a2 Demonstrate awareness of the national and international Pharmacovigilance systems
- a3: **Describe** the different categories, therapeutic uses, adverse effects and contraindications of drugs affecting autonomic nervous system and autocoids drugs.

| B1       | Classify the synthetic and natural drugs according to their mechanism of action, systemic effect, therapeutic uses, contraindication and toxicity                          | b2   | Categorize the different classes of drugs affecting of autonomic nervous system and autacoids, in related to their mechanism of action, pharmacological, effects, therapeutic uses, adverse effects and contraindications.                                 |  |  |  |
| B2       | Design risk reduction strategies to ensure patient safety and prevent medication errors, drug interaction, and adverse drug effects,                                       |  |  |  |  |  |
| В3       | Solve problems to reduce drug therapy problems   |  |  |  |  |  |
| B4       | Select drug therapy regimen using mathematical, genomic, clinical pharmacokinetic and pharmacodynamics principles for optimizing the patient therapy and medication safety | b1   | <b>Deduce</b> the importance of knowledge of the basic principles of pharmacokinetics and pharmacodynamics of drugs in safe and efficient practice for pharmacy doctor.  |  |  |  |
|          |  | b3   | Select the suitable management strategy, involving the proper dosage form, route of administration, and regimen, for patients in different medical situations relate to disturbances of functions of the autonomic nervous system and autacoid substances. |  |  |  |

#### **Professional and Practical Skills**

### الجمهورية اليمنية جامعة ذمار مركز التطوير الأكاديمي و ضمان الجودة

Alignment of CILOs (Course Intended Learning Outcomes) to PILOs (Program Intended Learning Outcomes)

- c1 **Calculate** the drug dosage using appropriate formulae, and basing on patient's weight, age, health condition, and the suitability the onset and duration of action of a drug.
- c2 **Administer** the required dose of different drug formulations using proper appropriate route of drug administration, devices and techniques, such as, injections, inhalers, transdermal patches etc.
- c3 **Apply** pharmacological principles for rational use of drugs in the management of diseases, that result from disturbances in functions of autonomic nervous system and autacoid substances.
- c4 **Detect** and solve problems, such as, side effects and drug interactions, related to drugs acting on autonomic nervous system, and autacoid drugs.

#### II. Course Description:

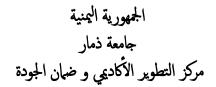

This course Introduce the student to the bases and principles of public health that include the definitions of common terminologies and meanings used in public health practice; Health indicators and statistical principles of survey studies; the principles of sanitary environment and ability of identification of environmental hazards

#### III. Course Objectives:

This course aims to:

1- Develop a graduate who would take a leadership role with other health care members in educating,

motivating, supervising and leading them in health promotion, prevention and control of diseases

- 2- Prepare a community- oriented physician capable of implementing preventive and control measures for common communicable and non communicable diseases on the individual, family and community levels and within the primary health care (PHC) setting following MOH policies and protocols.
- 3- Prepare a graduate who would become an advocate for preventive public health programs and resources
- 4- Able to determination of the deferent methods can be used from control of this pollutant
- 5- Suggested the deferent mechanisms for environment protection from the pollutant in her or his environment

#### IV. Course Intended Learning Outcomes (CILOs):

#### **Knowledge and Understanding:**

Alignment of CILOs (Course Intended Learning Outcomes) to PILOs (Program Intended Learning Outcomes)

After completing the course, the student will be able to:

| Knowledge and Understanding PILOs                         | Knowledge and Understanding CILOs                        |
|---|--|
| After completing this program, students would be able to: | After completing this course, students would be able to: |
| A1  | a1 Describe health, disease, spectrum of health          |
|   | and patterns of care                                     |
|   | a2 Describe major epidemiological study designs,         |
|   | advantages and limitations                               |
|   | a3 Describe prevention and control of infection,         |
|   | hospital infection and primary health care.              |

# Intellectual Skills: Alignment of CILOs (Course Intended Learning Outcomes) to PILOs (Program Intended Learning Outcomes) After completing the course, the student will be able to: Intellectual Skills PILOs Intellectual Skills CILOs After completing this program, students would be able to: After completing this course, students would be able to: b1 Calculate measures of disease frequency and

### **II.** Course Description:

The Medical Parasitology course provides an overview of human parasites and their diseases. Topics include the basic concept of medical helminthology, protozoology and entomology: types of parasites, host vector relationship, classification, mode of infections and effect of parasites upon host, distribution, morphology, life cycle, clinical features, pathology, treatment, prevention and control.

#### III. Course Objectives:

After completing this program, students would be able to recognize basic concepts of medical helminthology, protozoology and entomology

| IV. Course Intended Learning Outcomes (CILOs):            |   |  |  |  |  |

#### II. Course Description:

This course was designed as complimentary part of (Pharmaceutics I, II) courses. In contrast to the previous course which deal with liquid, semisolid or gaseous dosage form, this course provides knowledge and skills in designing solid pharmaceutical dosage, including powders, granules, tablets and capsules, which are globally the most widely manufactured dosage forms. In addition, the course covers pharmaceutical sterile products.

|           | III. Intended learning outcomes (ILOs)   |           |   |  |  |  |
|-----------|--|-----------|---|--|--|--|
|           | Course Intended Learning Outcomes  | Prog      | ram Intended Learning Outcomes  |  |  |  |
| a1        | Describe the stages of designing pharmaceutical solid and sterile dosage forms   | A1        | knows the basic principles of pharmaceutical, medical, health & environmental sciences, as well as, pharmaceutical calculations.  |  |  |  |
| a2        | Explicit the general properties, the types and roles of excipients, advantages and disadvantages of pharmaceutical solid and sterile dosage forms. | A2        | Sufficiently knows of the analytical & biotechnical techniques, necessary for isolation, refinement, analysis& titration& manufacturing of pharmaceutical substances & preparations |  |  |  |
| b1        | Classify pharmaceutical solid and sterile dosage forms.  | B2        | Accurately suggests of the correct choice of the drug treatment for various disease conditions according to the foundations of pharmacological therapy                              |  |  |  |
| <b>b2</b> | Design pharmaceutical solid and sterile dosage forms.  | B4        | properly Innovates of pharmaceutical products & evaluates them on the scientific bases.   |  |  |  |
| c1        | Handle efficiently and safely the chemical materials and tools used in the laboratory.   | C2        | Applies the concepts of pharmacovigilance in the dispensing and the preparation, storage and distribution of medicines safely and effectively                                       |  |  |  |
| c2        | Operate the instruments and prepare extemporaneous pharmaceutical solid and sterile dosage forms.  | <b>C4</b> | Efficiently operates, the different technologies and equipment in the area of pharmacy  |  |  |  |
| d1        | Participate efficiently with colleagues in a team work.  | D1        | Works effectively in a unique team  |  |  |  |
| d2        | Communicate effectively and behave in discipline with colleagues.  | D4        | Resides excellent relationships with the patients & related healthcare directions.  |  |  |  |

| IX | C.Course Policies:  |
|----|---|
| 1. | Class Attendance: At least 75 % of the course hours should be attended by the student. Otherwise, he/she will not be allowed to attend the final exam                     |
| 2. | <b>Tardy:</b> any student who is late for more than 15 minutes from starting the lecture will not be allowed to attend the lecture and will be considered absent.         |
| 3. | Exam Attendance/Punctuality: any student who is late for more than 30 minutes from starting the examwill not be allowed to attend the exam and will be considered absent. |
| 4. | Assignments & Projects: Assignments and projects will be assessed individually unless the teacher request for group work  |
| 5  | Cheating: Cheating by any means will cause the student failure and he/she must re-study the course  |
| 6  | Plagiarism: Plagiarism by any means will cause the student failure in the course. Other disciplinary procedures will be according to the college rules.                   |

#### **Course Description:** II.

This course was designed as complimentary part of (Pharmaceutics I, II) courses. In contrast to the previous course which deal with liquid, semisolid or gaseous dosage form , this course provides knowledge and skills in designing solid pharmaceutical dosage, including powders, granules, tablets and capsules, which are globally the most widely manufactured dosage forms. In addition, The course covers sterile pharmaceutical products.

الجمهورية اليمنية وزارة التعليم العالى والبحث العلم جامعة ذمار كلية العلوم الطبية قسم الصيدلة

#### III. Intended learning outcomes (ILOs) of the course:

- Brief summary of the knowledge or skill the course is intended to develop: •
- Describe the stages of designing pharmaceutical solid and sterile dosage forms 1.
- 2. Explicit the general properties, the types and roles of excipients, advantages and disadvantages of pharmaceutical solid and sterile dosage forms .
- Design pharmaceutical solid and sterile dosage forms . 3.
- Classify pharmaceutical solid and sterile dosage forms. 4.
- Handle efficiently and safely the chemical materials and tools used in the laboratory 5.
- Operate the instruments and prepare extemporaneous pharmaceutical solid and sterile dosage forms.
- Communicate effectively and behave in discipline with colleagues. 7.
- Participate efficiently with colleagues in a team work.

| X. | Course Policies:  |
|----|---|
| 1. | Class Attendance: At least 75 % of the course hours should be attended by the student.  Otherwise, he/she will not be allowed to attend the final exam                            |
| 2. | <b>Tardy:</b> any student who is late for more than 15 minutes from starting the lecture will not be allowed to attend the lecture and will be considered absent.                 |
| 3. | <b>Exam Attendance/Punctuality:</b> any student who is late for more than 30 minutes from starting the exam will not be allowed to attend the exam and will be considered absent. |
| 4. | Assignments & Projects: Assignments and projects will be assessed individually unless the teacher request for group work  |
| 5. | Cheating: Cheating by any means will cause the student failure and he/she must re-study the course  |
| 6. | Plagiarism: Plagiarism by any means will cause the student failure in the course. Other disciplinary procedures will be according to the college rules.                           |

### **II.** Course Description:

This course aims to provide the students with a basic knowledge about aspects of the design and action of drugs, drug discovery, drug development, and drug/receptor interactions, types of chemical bonds involved in drug-receptor interactions, drug mechanism of action, and drug metabolism. Also to enable the student to explain the drug-receptor interactions by drug design concept.

### **III.** Course Objectives:

- 1. To provide the student with basic knowledge of the effect of the physicochemical properties of drugs on the pharmacokinetic profile (absorption, distribution, metabolism, and excretion).
- 2. To give a background on the concept of Drug Design.
- 3. To educate the student with the principles of structure-activity relationships (SAR) and illustrate the effect of functional groups modification on the pharmacodynamics and pharmacokinetics.
- 4. To give the student a detailed background of the metabolic pathways of drugs illustrating the chemistry behind them.
- 5. To explain the Prodrug concept.
- 6. To explain the mechanism of action, SARs, and chemical synthesis of drugs of the adrenergic and cholinergic systems

#### I. Course **Description**:

The course aims to provide students with the necessary skills for extraction, separation chemical structures, identification, quantitative determination of the active ingredients (essential oils - glycosides- tannins, terpenoids, coumarins) from natural sources - and then identify these active ingredients either in pure form or in a mixture - a as different methods to evaluate these components, and their medicinal uses

II. Aims and Intended learning outcomes (ILOs) of **the** course:

#### 1. Aims of The Course:

#### The overall aims of the course are:

To provide the students with the knowledge and skills that enable them to understand, describe a
deal with the chemistry of glycosides, tannins, volatile oil, comarins of plant origin and the relate
techniques.

#### 2. Intended learning outcomes (ILOs) of the course:

#### A. Knowledge And Understanding:

• After successful completion the course, students will be able to:

| <b>Program Intended Learning Outcomes (Sub-</b> |    | rse Intended Learning Outcomes (CILOs)  |
|---|----|---|
| PILOs)  |    |   |
| A1  | a1 | : Discuss principles and applications of phytochemistry in  |
| A2  |    | synthesis, isolation, purification and identification of plant active constituents.   |
|   | a2 | : Understand principles of qualitative and quantitative determination of plant active constituents (such as volatile oils — glycosides-tannins, coumarins) a3: Enumerate the theories of isolation, synthesis, purification, identification and standardization of natural products |

#### VI. Learning Resources:

#### 1. Required Textbook(s) (maximum two).

- 1. Trease, CE and Evans, WC. Textbook of Pharmacognosy. 11th to 14th Editions. Tindal L.U.K.
- 2. Priciples and Practice of Phytotherapy, Modern Herbal Medicine, Siman
- **3.** Mills, Kerry Bone, Desmond Corrigan, James A. Duke and Janathan V. Wright, Churchill Living Stone (2000).

#### 2. Recommended Readings and Reference Materials.

- 1. Atal,CK and Kappor,BM.Cultivation and Utilisation of Medicianl Plants.
- 2. Wallis, TE. Textbook of Pharmacognosy, 5th Edition, J&A, Churchill Limited, U.K.
- 3. . Kokate, CKPurohit, AP. And Gokhale, SB. Pharmacognosy.
- 4. Walis T. A. "Textbook of Pharmacognosy", S. K. Jain for CBS Publishers & Distributors, Jain

|    | Bhawan, BholaNath Nagar, Shahdara, Delhi-110032 (India), 5th Edition, 1967, 1985, 1997,2002, 2003, 2004, 2005  |
|----|--|
|    | 5. Chemistry of the Monoterpenes, an Encyclopedia Hand book, Part A & B  |
|    | 6. William F. Erman Marcel Dekker, INC (1985).   |
| 3. | Essential References.  |
|    | 1. Tyler, VC, Brady, LR and Robers, JE. Pharmacognosy., 11th to 14th Editions;   |
|    | 2. Weiss R.F. and Fintelmann V. "Herbal Medicine", Thieme, Stuttgart, New York, 2nd Ed. (2000).  |
| 4. | Electronic Materials and Web Sitesetc.   |
|    | - http://www.botanical.com   |
|    | - http://www.ansci.cornell.edu/plants/medicinal/   |
| 5. | Other Learning Material.   |
|    | - Laboratory instruments and equipments are needed   |
| V  | - Data show projector  I. Course Policies:   |
| 1  | Class Attendance:  |
| ,  | ☐ Absence from lectures and/or tutorials shall not exceed 25%. Students who exceed the 25% limit   |
|    | without a medical or emergency excuse acceptable to and approved by the Dean of the relevant college   |
|    | shall not be allowed to take the final examination and shall receive a mark of zero for the course.  |
| ۲  | Tardy:   |
|    | ☐ Students should be attending the classes as its required for the assessments if the student is 15 minutes  |
|    | late in attending to the class for more than two classes he will loss 50% of quizzes mark.   |
| ٣  | Exam Attendance/Punctuality:   |
|    | ☐ All examination and their roles will be according to Students affairs regulations  |
| ٤  | Assignments & Projects:  |
|    | - Student who is submitting the assignments or the projects on time, will be awarded good percentage in  |
| 0  | grading of participation.  |
| 3  | Cheating:  |
|    | - All students must be an ideal behavior and respect each other, their teachers and respect the roles of the colleague. In addition, students should follow safety roles while working in the lab. Those who has |
|    | been caught in any cheating case will be punished according to the Students affairs regulations  |
| 6  | Plagiarism:  |
|    | ☐ Student will be punished depend upon gravity of the action and according to Students affairs   |
|    | regulations which might be ranged from rewriting the homework to suspension or dismissal   |
| 7  | Other policies:  |
|    |  |
|    | - Using mobile or another electronic device capable to store or transfer data in class during the lecture or the exam is forbidden.  |

## **Course Specification**

## Pharmacology II

## II. Course Description:

This course continuation of the study of the properties, effects of the primary agents in the major drug categories, mechanism of action, pharmacokinetic, clinical use & toxicities. The first part of this course offers the student with the general knowledge on the common drugs affecting central nervous system (anxiolytics, hypnotics, antidepressants, antipsychotics, anticonvulsants, Parkinson's disease, Alzheimer's disease, local and general anesthetics, opioid analgesics). The second part deals with drugs affecting endocrine system (hypothalamic, and pituitary hormones, thyroid hormones and antithyroid drugs, pancreatic hormones & antidiabetic drugs, adrenocortical steroids, and sex hormones) and agents affecting calcium balance.

## **III. Course Objectives:**

#### The overall aims of the course are:

- 1. To increase knowledge of student with the correct classification of drugs used in the treatment of CNS disturbances (such as, anxiety, depressant, Parkinsonism, seizures) and abnormal excess or deficiency of hormones.
- 2. To distinguish the mechanism, therapeutic uses, side effects/toxicity, contraindications, and interactions of the major classes acting on the CNS, and endocrine systems.
- 3. To apply this knowledge on clinical experience & research work.

### IV. Course Intended Learning Outcomes (CILOs):

### **Knowledge and Understanding:**

Alignment of CILOs (Course Intended Learning Outcomes) to PILOs (Program Intended Learning Outcomes)

#### After completing the course, the student will be able to:

- al Classify the major drug categories as they relate to major disorders affecting central nervous, and endocrine systems.
- a2 Explain in detail the mechanisms of action, therapeutic uses, contraindications and adverse effects of commonly prescribed drugs used in the treatment of CNS and endocrine disorders
- a3 know the Differentiations between narcotic and non-narcotic analgesics based on their mechanism of action, clinical uses and adverse effects.

|    | Knowledge and Understanding PILOs  | Knowledge and Understanding CILOs   |  |  |
|----|--|---|--|--|
|    | After completing this program, students would be able to:  |   | completing this course, students ould be able to:  |  |
| A1 | Explain the fundamentals of general sciences and the basic and biomedical sciences and their relations to pharmacy profession.   |   |  |  |
| A2 | Illustrate the fundamentals of social and behavioral sciences relevant to pharmacy, ethics of health care and its impact on their relationship with patients and other healthcare professionals. |   |  |  |
| A3 | Describe relationships between chemical structure of compounds of pharmaceutical and medicinal interest and biological activities  | a1  | Classify the major drug categories as they relate to major disorders affecting central nervous, and endocrine systems. |  |
| A4 | Define basic principles of drug: target identification, design, informatics, and mechanisms of action  | Explain in detail the mechanisms of action, therapeutic uses, contraindication and adverse effects of commonly prescribed drugs used in the treatment of CNS and endocrine disorders  Know the Differentiations between oping agonists and opioid antagonists based their mechanism of action, clinical uses and adverse effects. |  |  |
|    |  |   |  |  |

| ſ | A5 | Outline principles of clinical pharmacology, |    | Explain in detail the mechanisms of         |

|   |    | therapeutics and Pharmacovigilance.          |    | action, therapeutic uses, contraindications |
|   |    |  | a2 | and adverse effects of commonly             |
|   |    |  |    | prescribed drugs used in the treatment of   |
|   |    |  |    | CNS and endocrine disorders                 |
|   |    |  |    |   |

#### **Intellectual Skills:**

Alignment of CILOs (Course Intended Learning Outcomes) to PILOs (Program Intended Learning Outcomes)

- **b1** Compare between the different classes of drugs used in the treatment CNS and hormones deficiency or excess, based on their mechanism of action, pharmacological effects, therapeutic uses, adverse effects and contraindications.
- **b2 Select** an appropriate management strategy, involving the proper dosage form, route of administration, and regimen, for patients with different clinical situations of CNS, and endocrine disorders.
- b3 **Identify** the common serious problems related to drugs used in the treatment of CNS and endocrine disorders and effectively manage them.

#### **Professional and Practical Skills**

Alignment of CILOs (Course Intended Learning Outcomes) to PILOs (Program Intended Learning Outcomes)

- c1 Calculate dosage and dose regimen of drugs that are used in the treatment of different conditions of CNS and endocrine disorders.
- c2 Write a legal prescription with clear instructions for use of the drugs in different clinical conditions of CNS and endocrine diseases
- c3 **Apply** pharmacological principles for rational use of drugs in the management of diseases, that result from disturbances in functions of CNS and endocrine system.
- c4 **Detect** and manage problems, such as, side effects and drug interactions, related to drugs that are used in the treatment of CNS and endocrine disorders.
